No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence represents the mouse antibody 21.6 heavy chain variable credity of directed against leukocyte adhesion molecule VLA-4. Cloned CDNA sequences of mouse 21.6 VH and VL (see AAQ9989) regions are linked to human constant regions in the construction of a humanized antibody against VLA-4. The 5' and 3' ends of the mouse cDNAs are modified using PCR primers (See AAQ9989-98) and then subcloned into mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized heavy chain, amino acids H27, L28, H29, H30, H44 nd H71 in the human HC VR framework are replaced by the amino acid present in the equivalent position of the mouse classification of a leukocyte to an endothelial cell and considered into COS cells. The humanized antibodies can be used to inhibit adhesion of a leukocyte to an endothelial cell and considered in the treatment of stroke, cerebral traumas, meningitis or encephalitis. The antibodies can also be used for detecting VLA-4. for affinity nurrification or for generating the constant of the mouse can also be used for detecting VLA-4. for affinity nurrification or for generating the constant of the mouse can also be used for detecting VLA-4. for affinity nurrification or for generating the constant of the mouse can be used to the constant of the mouse can also be used for detecting VLA-4. for affinity nurrification or for generating the constant of the mouse can be used to the constant of the mouse constant of the mouse constant of the mouse constant of the constant of the mouse constant of the mouse constant of the mouse constant of the constant of the constant of the mouse constant of the constant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

This polypeptide comprises the heavy chain variable region (VH) of mouse anti-alpha-4 integrin monoclonal antibody 21.6. The complementarity determining regions (CDRs) of the 21.6 VH can be incorporated into a human 21/28 CL framework to produce a claimed incorporated into a human 21/28 CL framework to produce a claimed in the manufacture of a medicament for antibody that is used in the manufacture of a medicament for treating a disease selected from asthma, atherosclerosis, AIDS, dementia, diabetes, inflammatory bowel disease, rheumatoid archiritis, transplant rejection, graft versus host disease, tumour metastasis, nephritis, atopic dermatitis, psoriasis, myocardial ischaemia, and acute leukocyte mediated lung injury. The antibody may also be used in the affinity purification of alpha-4 integrin for use as a vaccine or an immunogen. It is also useful for
        equivalent to that
             for use as a vaccine or an immunogen. It is also useful for generating idiotypic antibodies. The humanised antibodies of the invention have a half-life in the human circulation essentially
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 18; Page 69-70; 107pp; English.

PT New humanised antibodies against VLA-4 - used for inhibiting pri leukocyte adhesion to endothelial cells, partic. for treating PT leukocyte adhesion to endothelial cells, partic. for treating PT inflammatory disease.

XX Disclosure; Page 68; 105pp; English.

XX The sequence represents the mouse anti-VLA-4 antibody 21.6 heavy chain CC variable region (without signal sequence). Cloned cDNA CDR sequences of mouse 21.6 variable light and variable heavy regions are linked to human constant framework regions of the REI antibody for the light chain and the 2*CL antibody for the heavy chain in the construction of a humanized antibody against VLA-4. The 5' and 3' ends of the mouse cDNAs are modified using PCR primers (See AAQ99895-98) and then subcloned into constant regions. In the humanized light chain, amino acids L45, L49, CC L58 and L69 in the humanized alight chain, amino acids L45, L49, CC L58 and L69 in the equivalent position of the mouse 21.6 Ig light chain. Plasmids encoding the chimeric antibodies are transfected into CC cells. The humanized antibodies can be used to inhibit adhesion of a leukocyte to an endothelial cell and to treat inflammatory diseases such as multiple sclerosis. They can also be used in the treatment of stroke, cerebral traumas, meningitis or encephalitis. The antibodies can also be used for detecting VLA-4, for affinity purification or for generating anti-idiotype antibodies.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is the variable heavy region of the Chimaeric human/murine monoclonal antibody (MAB) ONS-M21. The MAB CWas prepd. by combining light and heavy variable region DNA, from a murine anti-human myeloblastoma cell MAB, with human light cand heavy constant region sequences, respectively to produce chimaeric human/murine light and heavy chain DNA mols. A recombinant vector for the expression of the heavy and light chain DNA mols. was prepd., and used to transform a host cell. The host cell was then cultured, and the expression prods. of the heavy and light chain DNA mols. sepd. and connected with a peptide linker to produce a single stranded Fv region. The reshaped Fv region has an agent for the diagnosis and treatment of cerebral tumours, ce.g. myeloblastoma.

                                                                                                                                                                                                                                                                                                                                                                                                  The gene fragment encoding the V heavy chain region is used to produce a genetically engineered antibody capable of reacting specifically with feline calcivirus (FCV). The antibody can be to treat, prevent and diagnose FCV infection. It has a broad neutralising spectrum and can be used to neutralise viruses whave acquired immunity to other neutralising antibodies.

KM1486 is produced by the hybridoma FERM BP-5651, which was prepared by immunising Balb/c mice with hIL-5R alpha, fusing spleen cells obtained from the mice with mouse myeloma P3-U1 cells and screening the resultant hybridomas. The MAb can be used to detect or assay for hIL-5R alpha and cells expressing it on their surface, especially to diagnose allergic respiratory diseases, e.g. chronic bronchitis. It can also be used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Š
                                                             The sequence represents the human reshaped antibody 21.6 heavy chain variable region against leukocyte adhesion molecule VLA-4. Cloned cDNA sequences of mouse 216 VH (AAQ99892) and VL (AAQ99889) regions are linked to human constant regions in the construction of a humanized antibody against VLA-4. The 5' and 3' ends of the mouse cDNAs are modified using PCR primers (AAQ99895-98) and then
subcloned into mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized heavy chain, amino acids H27, H28, H29, H30, H44 nd H71 in the human HC VR framework are replaced by the amino acid present in the equivalent position of the mouse 21.6 Ig H chain. Plasmids encoding the

The humanized antibodies can be used to inhibit adhesion of a leukocyte to an endothelial cell and to treat inflammatory diseases such as multiple sclerosis. They can also be used in the treatment of stroke, cerebral traumas, meningitis or encephalitis. The antibodies can also be used for detecting VLA-4, for affinity purification or for

                                                                                                                                                                    AAB07967
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This polypeptide, designated Ha, comprises the heavy chain variable CC region (VH) of a humanised alpha-4 integrin antibody 21.6 (see also CA AW22413). It is composed of complementarity determining regions from CC the VH region (see AAW22410) of mouse alpha-4 integrin monoclonal cantibody 21.6 and a modified human 21/28/CL framework. It can be carperssed in mammalian host cells following PCR amplification and CC mutagenesis of appropriate mouse and human DNA sequences. The numanised 21.6 VH and a humanised 21.6 VL (see AAW22412) can be used CC to produce a claimed humanised 21.6 VL (see AAW22412) can be used CC to produce a claimed humanised 21.6 VL (see AAW22412) can be used CC manufacture of a medicament for treating asthma, atherosclerosis, CC AIDS, dementia, diabetes, inflammatory bowel disease, rheumatoid carbinostasis, nephritis, atopic dermatitis, proriasis, myocardial CC ischaemia, and acute leukocyte mediated lung injury. The humanised cantibody has a half-life in the human circulation essentially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Uses of humanised alpha-4 integrin antibody

The antibody has a binding specificity to B7 molecules. The antibody is used to construct humanized immunoglobulins, which comprise an antigen binding region of non-human origin and a portion of a human immunoglobulin. The humanized immunoglobulins are useful for treating autoimmune diseases, infectious diseases, inflammatory disorders, systemic lupus erythematosus, diabetes mellitus, insulitis, asthma, arthritis, inflammatory bowel disease, inflammatory dermatitis, and multiple sclerosis. The immunoglobulins are also useful for treating a transplant recipient or preventing transplant rejection in a transplant recipient, and treating proliferative disease the teachers, lymphoma and cancer), anaemia (sickle-cell anaemia, the letter of the state of the sta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              systemic lupus erythematosus; diabetes mellitus; insulitis; asthma; arthritis; inflammatory bowel disease; cancer; inflammatory dermatitis; multiple sclerosis; transplant rejection; proliferative disease; leukemia; lymphoma; anaemia; sickle-cell anaemia; thalassemia;

                                                                                                                                                                                         CC AAR95946-R95948 represent sequences for variable regions of an antibody CC produced by the hybridoma cell line HNK-20. This sequence represents CC the sequence for the antibody HNK-20 variable heavy chain. HNK-20 is a CC murine hybridoma cell line, that produces JgA specific for the F CC glycoprotein of respiratory syncytial virus (RSV). The DNA encoding CC these sequences were isolated using primers specific for the F CC untranslated region of the variable region, and for the intron CC downstream of the rearranged J region (see AAT30459-T30545 for primer CC sequences). The DNA encoding these sequences can be inserted into vectors CC containing heterologous (such as human) constant region genes, for the CC containing heterologous (such as human) constant region genes, for the CC are useful in the treatment and diagnosis of infection by RSV, such as CC are useful in the treatment and diagnosis of infection by RSV, such as CC encoding the treatment and diagnosis of infection by RSV, such as CC as a template, variable region genes can be isolated without producing CC Also, by using the genomic DNA, no knowledge of the DNA sequence CC encoding the target variable region is required. Chimeric antibodies CC host being treated, are less likely to cause adverse immune reactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAR95948

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        QΥ
The sequence encodes the mouse antibody 21.6 heavy chain variable cregion, Ha, directed against leukocyte adhesion molecule VIA-4. Cloned CDNA sequences of mouse 21.6 VL and VH (AAO99889 and AAO99892) regions are linked to human constant regions in the construction of a humanized antibody against VIA-4. The 5' and 3' ends of the mouse cDNAs are modified using PCR primers (See AAO9989-98) and then subcloned into mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized light chain, amino acids L45, L49, L58 and L69 in the humanized light chain, amino acids L45, by the amino acid present in the equivalent position of the mouse 21.6 Ig L chain. Plasmids encoding the chimeric antibodies are transfected into COS cells. The humanized antibodies can be used for treating inflammatory diseases such as multiple sclerosis. They can also be used in the treatment of stroke, cerebral traumas, meningitis or encephalitis. The antibodies can also be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antibody engineering.

from ATCC
The gresent sequence represents the heavy chain variable region of the humanişed murine antibody IF1. The antibody has a binding specificity to B7 molecules. The antibody is used to construct humanized immunoglobulins, which comprise an antigen binding region of non-human

                                                                                                                                                                                                                                                                                                                                                                                             origin and a portion of a human immunoglobulin. The humanized immunoglobulins are useful for treating autoimmune diseases, infectious diseases, inflammatory disorders, systemic lupus erythematosus, diabetes mellitus, insulitis, asthma, arthritis, inflammatory bowel disease, inflammatory dermatitis, and multiple sclerosis. The immunoglobulins are also useful for treating a transplant recipient or preventing transplant rejection in a transplant recipient, and treating proliferative disease (leukemia, lymphoma and cancer), anaemia (sickle-cell anaemia, thalassemia and aplastic anaemia), inborn errors of metabolism, congenital immunodeficiency diseases, and myeloid dysplasia syndrome.
